

ABSTRACT OF THE DISCLOSURE

A system allowing persons to operate their computer comfortably while lying in bed. The system has a user friendly keyboard, that provides preselection feedback indicating prior to a keystroke being entered, thus allowing the individual to verify the correct key before pressing down the key. Additional aspects of the system include the user of display goggles with panning control, and a see-through mode. Numerous additional system and methods are described.

DRAWINGS

There is attached 51 sheets of drawings.
